COMPANY PROFILE

ABOUT US

DrivenBy Technology is a forward-thinking technology solutions company committed to driving global progress through innovative, reliable, and high-impact digital solutions. We develop and manage software platforms, deliver comprehensive ICT services, and execute general contracts that support digital and infrastructure transformation across sectors.

Our core expertise spans ERP development and customization, web and mobile application development, systems integration, and ICT consultancy. Beyond digital systems, we also design, install, and manage solar energy solutions—bridging technology and sustainability to power smarter, more resilient operations, particularly in environments where dependable electricity is critical to continuity.

At DrivenBy Technology, our purpose is simple: to drive meaningful advancements in every facet of life through accessible, transformative technology. We partner with organizations to solve complex problems, improve efficiency, and unlock new possibilities—delivering solutions that are secure, scalable, well-documented, and built for long-term impact.

OUR VISION

To drive meaningful and sustainable global advancement across all facets of life by harnessing innovative, accessible, and transformative technology solutions—powered by reliable and clean energy—to improve how people live, work, and connect.

OUR MISSION

To design, develop, and deliver innovative technology and clean energy solutions that solve real-world problems, empower individuals, organizations and communities, and improve lives—through reliable, scalable, and secure systems.

OUR VALUES

INNOVATION

Every problem is unique, so we create tailored solutions that fit your goals, constraints, and operating environment.

RELIABILITY

We build solutions that work consistently in real-world conditions.

INTEGRITY

We communicate clearly, set realistic expectations, and take ownership of outcomes.

SECURITY & PRIVACY

We treat protection of systems and data as a baseline requirement, not an add-on.

EXCELLENCE

We focus on quality, testing, and clean implementation that is maintainable over time.

SUSTAINABILITY

We design with efficiency and long-term resilience in mind, including clean energy where it supports continuity.

CUSTOMER SUCCESS

We measure success by practical results, user adoption, and long-term impact.

WHAT WE DO

DrivenBy Technology LTD provides integrated technology and power-continuity services that help organizations and individuals operate smarter, faster, and more sustainably. Our services include:

ERP Development & Customization

We work through your operational problem, design the right workflows, implement customizations, automate routine processes, and deliver reporting/visualization that supports faster decisions—then we support the system after go-live.

Systems Integration

We connect your software tools through APIs and secure integrations so data flows correctly across platforms and manual work is reduced.

Network & Infrastructure Services

We plan, install, and administer secure networks—covering routing, segmentation (VLANs), firewall rules, Wi-Fi deployment, and ongoing troubleshooting.

ICT Consultancy & Support

We provide technology guidance, audits, documentation, and ongoing support that helps teams operate confidently and reduce downtime.

Software & Mobile App Development

We design and build web and mobile applications that solve specific business needs, integrate cleanly with existing systems, and remain easy to maintain as you grow.

Cloud Infrastructure

We design and deploy reliable cloud environments, implement monitoring and backups, optimize performance and cost, and ensure your infrastructure can scale safely.

Cybersecurity Services

We harden systems, enforce access controls, assess vulnerabilities, and run practical tests to ensure your software and infrastructure remain resilient against real-world threats.

Solar & Power Continuity Solutions

We assess critical loads, design and install solar/inverter systems to support uninterrupted operations, and provide maintenance support where required.

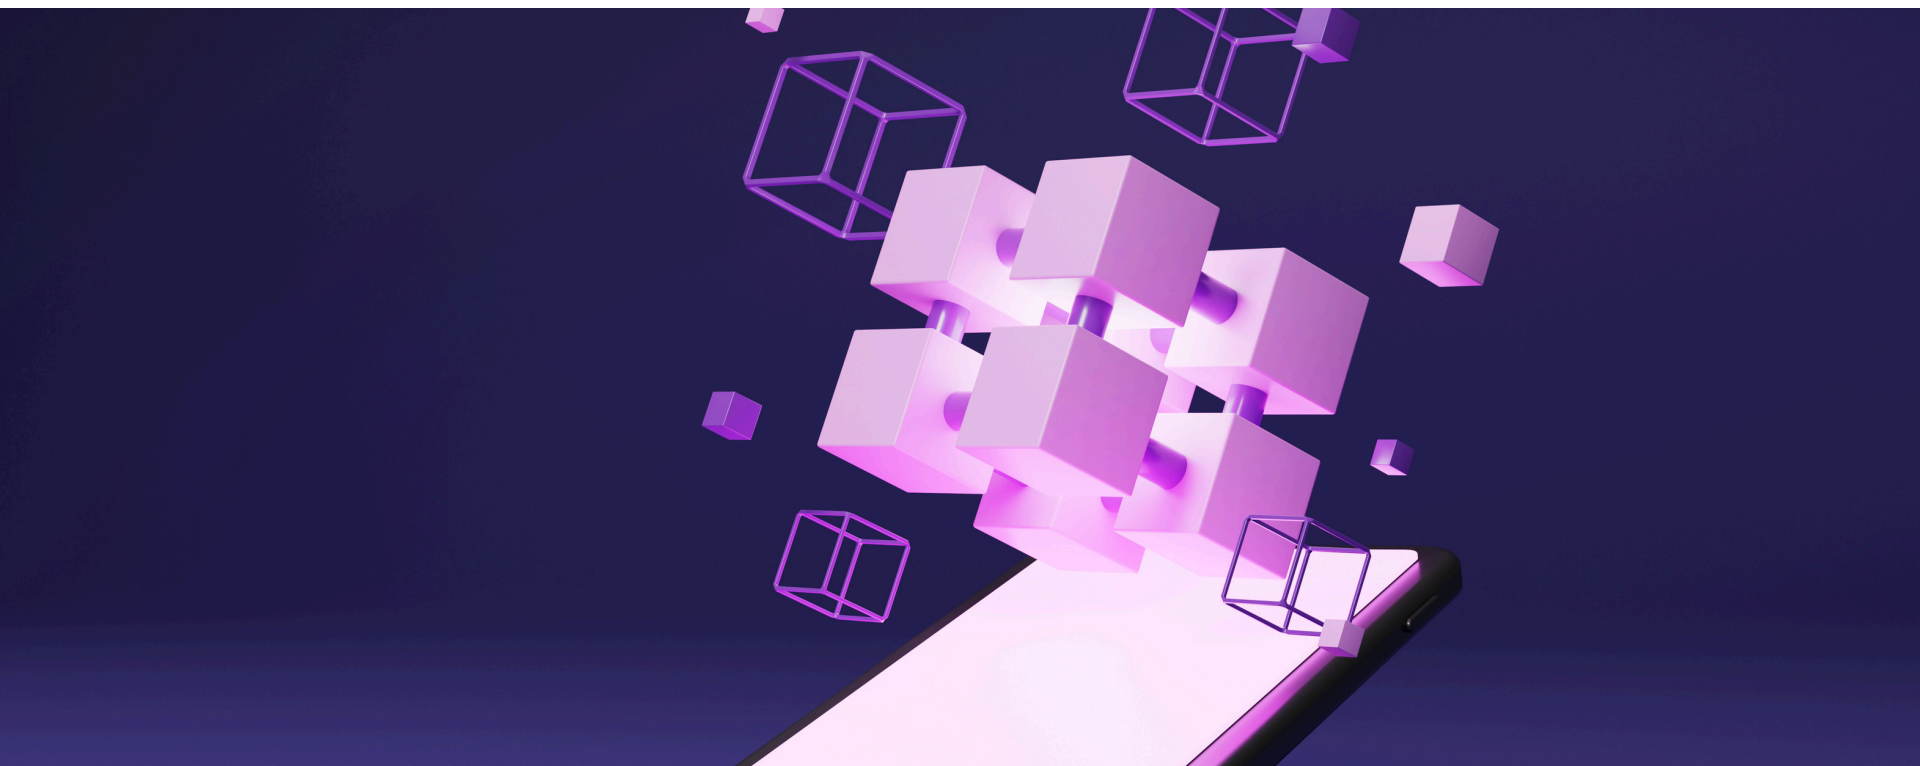

OUR KEY DIFFERENTIATORS

We deliver end-to-end solutions—planning, implementation, documentation, and support—so customers don't get stranded after deployment. We build with security in mind from day one, using practical controls that protect both systems and data. We design for real operating environments, including unreliable power, so solutions remain dependable and usable. We document thoroughly and hand over cleanly, making it easier for customers to maintain, audit, and scale their systems.

OUR DELIVERY APPROACH

We start by understanding your goals, constraints, and current environment so the solution is correctly scoped from the beginning. We translate requirements into a clear design and implementation plan with agreed milestones and acceptance criteria. We implement in structured phases, validate through testing and user review, and document as we build to ensure smooth handover. We support go-live with stabilization, training, and follow-up improvements so the solution delivers measurable value long after deployment.
